

# Extra note 5-7

## ●Lecture 5

This part of the muscle is called puborectalis, and forms a U-shaped sling that holds the anorectal junction angled forwards. مهم نعرف آخر جملة

مهم نعرف pelvic diaphragm m لل nerve supply

levator ani is mainly supplied by a branch from S4 spinal nerve.

The levator prostate or pubovaginalis, and puborectalis are supplied by the perineal branch of S4 and the inferior rectal branch

مهم نعرف

Coccygeus: It lies edge to edge with the lower border of piriformis and is overlapped anteriorly by iliococcygeus

Spermatic Cord: These structures meet at deep inguinal ring and together form spermatic cord, which suspends the testis in scrotum, and extends from deep inguinal ring to posterior border of testis.

ركزوا هون ممكن الدكتور يخربطنا ب anterior border

The tunica vaginalis covers anterior, medial, and lateral surfaces of testis.

ممكن يخربطنا الدكتور و يضيف انها cover posterior surface

vas deferens lying on its medial side

ممكن يخربطنا الدكتور ب lateral side

Vas deference leaves the canal at deep inguinal ring and turns round lateral side of inferior epigastric artery and pass medially behind this artery and across external iliac vessels

ركز عليه الدكتور جدا مهم

Vas deference ascends over posterior border of testis مهمة كثير

## ●Lecture 6

مهم نعرف انه

The capsule of prostate gland is continuous anterolaterally with puboprostatic ligaments, and posteriorly with rectovesical septum

## ●Lecture 7

مهم جدا و من أسئلة الامتحان

prostate zones
