

# General Anatomy - Mock Exam:

1. Which one of the following is an irregular bone?

- A) Scapula
- B) Vertebra
- C) Patella
- D) Humerus
- E) Calcaneus

**Answer: B**

2. Which one of the following is supplied by facial nerve?

- A) Anterior belly of digastric
- B) Posterior belly of digastric
- C) Mylohyoid
- D) Geniohyoid
- E) Sternomastoid

**Answer: B**

3. After a car accident, a patient was unable to extend his hip joint. Which muscle is most probably affected?

- A) Gluteus medius
- B) Quadratus femoris
- C) Gracilis
- D) Gluteus maximus
- E) Obturator internus

**Answer: D**

4. As regards the masseter muscle, which of the following is INCORRECT?

- A) Is supplied by mandibular branch of trigeminal nerve
- B) It retracts the protruded mandible
- C) It elevates the mandible
- D) Is inserted in the mandible
- E) It acts on temporo-mandibular joint

**Answer: B**

5. The pterygoid process is a part of:

- A) Occipital bone
- B) Frontal bone
- C) Sphenoid bone
- D) Temporal bone
- E) Parietal bone

**Answer: C**

6. The anterior structure is the structure that lies:

- A) Closer to the upper end of the body
- B) Closer to the lower end of the body
- C) Closer to the front of the body
- D) Closer to the back of the body
- E) Closer to the median plane of the body

**Answer: C**

7. Which of the following is a multipennate muscle?

- A) Deltoid
- B) Palmar interossei
- C) Dorsal interossei
- D) Rectus femoris
- E) Quadratus femoris

**Answer: A**

8. The foramen transversarium is present in:

- A) Sacral vertebrae
- B) Thoracic vertebrae
- C) Cervical vertebrae
- D) Lumbar vertebrae
- E) Coccygeal vertebrae

**Answer: C**

9. Supination is done by:

- A) Brachialis
- B) Triceps brachii
- C) Biceps brachii
- D) Pronator teres
- E) Supraspinatus

**Answer: C**

10. Cross leg position is done by:

- A) Gracilis
- B) Sartorius
- C) Semitendinosus
- D) Soleus
- E) Plantaris

**Answer: B**
